

Town of Regina Beach – Water Treatment Plant – Water Supply Tap

During water disruptions, water will be made available for affected property owners/residents ONLY for the duration of the water disruption. An external self-shutting tap has been installed at the Town of Regina Beach water treatment plant on the east wall as detailed below. To operate, one need only pull on the handle and the water will flow from the tap. Once the handle is release, the tap will automatically close.

Please contact the Town of Regina Beach office if there are any issues/problems with operating the tap.
